Product overview

What Bookeepit does, everything that is in it, what it costs, who it suits — and what it does not do.

22 November 2026

The problem it solves

Most small businesses run on three systems that disagree with each other: a till, a stock spreadsheet, and an accountant's file that arrives two months late. The numbers never quite reconcile, and nobody can say what this month looks like until long after they could have done anything about it.

Bookeepit is one system - a full ERP rather than an accounting package with extras bolted on. A sale at the counter moves the stock, the customer's balance and the ledger in the same instant, because they are the same record.

What it does

Sell anywhere. A till that keeps working when the internet does not, and syncs when it returns. Multiple warehouses, barcode scanning, split payments, and a receipt your customer recognises.

Books that keep themselves. Sales, purchases and expenses post to a real chart of accounts as they happen. Trial balance, profit and loss, and a statement of financial position that balances — not a spreadsheet somebody rebuilds each month.

One group, many companies. Run each business separately and consolidate them properly: intercompany trade removed, currencies translated, and membership dated so last year reports as last year was.

Only the tools you use. Twenty-one optional modules, from manufacturing to fleet to school management. Answer four questions at sign-up and the rest stay out of your way.

27

optional modules — switch on only what you use

24

languages, editable without a developer

317

permissions, so a cashier sees a till and not your margins

Who it suits

- Retail, restaurants and pharmacies that take money at a counter
- Wholesalers and distributors invoicing to account
- Workshops and service businesses running job cards
- Anyone operating **more than one company** who needs them consolidated

> **Where it is a poor fit.** If you need heavy manufacturing planning, multi-country statutory payroll, or a warehouse management system with pick-path optimisation, this is not that. It is deliberately a system a business can run without a full-time administrator.

What is included

All 27 areas below are part of the product. You are not sold them one at a time: sign-up switches on the ones that fit your trade and keeps the rest out of the way until you ask for them.

Sales. Point of Sale, Invoicing & Estimates, Customers & Receivables, Online Store, WooCommerce & Shopify Integration, Sales Commissions, Marketing Campaigns.

Inventory & Procurement. Inventory Management, Multiple Warehouses, Purchasing & Suppliers, Manufacturing & MRP.

Finance. Accounting, Expenses & Petty Cash, Financial Statements, Double-Entry Accounting.

People. HR Management, Payroll, Recruitment, Roles & Permissions.

Operations. Projects & Tasks, Asset Management, Fleet Management, Service & Maintenance, Bookings, Document Management.

Industry Solutions. School Management, Hospital Management.

What it costs

A free Starter tier, then **₦1,500 a month** for the first paid rung, up to ₦50,000 a month. No card needed to start, and you can switch or cancel at any time.

Starter. Free. 2 users, 1 warehouse, 50 invoices a month.

Bronze. ₦1,500 a month, or ₦15,000 a year. 3 users, 1 warehouse, Unlimited invoices a month.

Silver. ₦3,500 a month, or ₦35,000 a year. 10 users, 3 warehouses, Unlimited invoices a month.

Gold. ₦10,000 a month, or ₦100,000 a year. 30 users, 10 warehouses, Unlimited invoices a month.

Platinum. ₦50,000 a month, or ₦500,000 a year. Unlimited users, 20 warehouses, Unlimited invoices a month.

Add-on modules, where your plan does not already include them: Fleet Management, Hospital, School and Manufacturing — ₦100,000 a year each.

Getting started

Sign-up asks four questions — what you sell, whether you hold stock, whether customers pay later, and whether you have staff. From those it builds your chart of accounts, switches on the modules that fit your trade, and hides the ones you do not need. Nothing is locked: every choice is a setting you can change afterwards.

Security and your data

Every company's data is held separately, access is yours to grant line by line, and you can take the whole lot out whenever you want.

Separated by company. Each company's records are scoped to that company. A query that cannot say which company it is for does not run.

Access you control. Over three hundred separate permissions, so a cashier sees a till and not your margins.

Backups you own. Take a full database backup from the settings screen, or have one sent to your own S3, Google Drive or Dropbox on a schedule.

Nothing locked in. Every report exports to Excel and PDF. Leaving is a supported feature, not a favour.

Common questions

Is Bookeepit suitable for small businesses?

Yes. You can start with the basic tools you need and add more modules as your business grows.

Can I manage multiple companies?

Yes. Bookeepit supports multiple companies and consolidated reporting for business groups.

Can I manage multiple branches and warehouses?

Yes. You can manage inventory and operations across multiple locations.

Does Bookeepit have POS?

Yes. Bookeepit's POS supports sales processing and can operate offline when connectivity is unavailable.

Can Bookeepit handle accounting?

Yes. Bookeepit includes accounting, double-entry bookkeeping, expenses and financial statements.

Can I control what my employees can access?

Yes. Bookeepit provides detailed roles and permissions so you can control what each user can see and do.

Can I export my business data?

Yes. Reports can be exported to Excel and PDF, and database backups can also be created.

Can Bookeepit integrate with my existing systems?

Bookeepit supports integrations such as WooCommerce and Shopify, with additional integrations available depending on your requirements.

What if I need something that isn't listed?

Ask us. Bookeepit is designed to support different types of businesses, and we're happy to discuss your requirements and tell you what is already available, what can be configured and what may require additional development.

Start with your own data

Create a company, add a product, take a sale — you will see the ledger entry it made.
